

Inkjet Inks for Case Coding. Keep the quality. Reduce your costs.

PRODUCT IDENTIFICATION NETWORK

Marking, Coding & Labeling Solutions

Product Identification Network's high-quality inkjet inks are guaranteed to either meet or exceed the OEM standard. Reduce ink costs by using inks that are aggressively filtered and deliver superior performance for both high resolution and large character printer systems.

PIN Group inks are ideal for drop-on-demand printing on corrugate materials and offer cost competitive results. The following features of PIN's inks help keep costs low and performance high:

- Exacting filtration standards assure free flow of ink through all filters with no build-up. Large character inks utilize de-ionized water and are extensively filtered eliminating virtually all particles. High resolution inks are filtered to less than 1 micron.
- 100% "pour-over" replacement inks save time and do not require a system flush prior to use.

These compatible inks are designed to be used with most OEM coders including the following brands:

- | | | |
|-----------------------------------|-----------------------------------|----------------------------------|
| <input type="checkbox"/> Marsh | <input type="checkbox"/> Loveshaw | <input type="checkbox"/> Dominio |
| <input type="checkbox"/> FoxJet | <input type="checkbox"/> Mathews | <input type="checkbox"/> Markem |
| <input type="checkbox"/> Videojet | <input type="checkbox"/> HSA | <input type="checkbox"/> Imaje |
| <input type="checkbox"/> Diagraph | <input type="checkbox"/> ITW | |

Various sizes are available to accommodate both small and large volume delivery systems for maximum efficiency. For a complete listing of ink solutions, please contact your PIN representative today.
